

CRITERIA COMPARISON TABLE

Community Advisory Committee Meeting, Thursday, December 6, 2007

CRITERIA COMPARISON TABLE

- Provided in response to request from CAC
- Manitoba/Saskatchewan rely on the CCME soil criteria
- Comparison of soil criteria from several jurisdiction across Canada, US and internationally
- Majority of criteria are ‘trigger’ values intended to promote further study
- Intervention values indicate the need for action (clean-up)

JURISDICTIONS CONSIDERED

- CCME
- Ontario
- BC
- Alberta
- US EPA (regional)
- CalEPA
- Municipal (San Francisco)
- The Netherlands
- Australia
- United Kingdom

JURISDICTION COMPARISON

- Large amounts of variability between jurisdictions
- CCME criteria tend to be conservative (low)
- Majority of criteria are intended as ‘triggers’ (similar to CCME)
- Similar conclusions/actions if Flin Flon concentrations were found elsewhere
